

Quantium Virtual Experience Program

Author: Raghul V

Task 2: Experimenting and Uplift Testing

- Extend your analysis from Task 1(Data Preperation and customer analysis) to help you identify benchmark stores that allow you to test the impact of the trial store layouts on customer sales.
 - Select control stores – explore the data and define metrics for control store selection – "What would make them a control store?" Visualize the drivers to see suitability.
 - Assessment of the trial – get insights of each of the stores. Compare each trial store with ontrol store to get its overall performance. We want to know if the trial stores were successful or not.
 - Collate findings – summarise findings for each store and provide recommendations to share with client outlining the impact on sales during trial period.

Check significance of Trial minus Control stores TOT_SALES Percentage Difference Pre-Trial vs Trial.

Step 1: Check null hypothesis of 0 difference between control store's Pre-Trial and Trial period performance. Step 2: Proof control and trial stores are similar statistically

- Check p-value of control store's Pre-Trial vs Trial store's Pre-Trial.
- If <5%, it is significantly different. If >5%, it is not significantly different (similar). Step 3: After checking Null Hypothesis of first 2 step to be true, we can check Null Hypothesis of Percentage - Difference between Trial and Control stores during pre-trial is the same as during trial.
- Check T-Value of Percentage Difference of each Trial month (Feb, March, April 2019).
- Mean is mean of Percentage Difference during pre-trial.
- Standard deviation is stdev of Percentage Difference during pre-trial.
- Formula is Trial month's Percentage Difference minus Mean, divided by Standard deviation.
- Compare each T-Value with 95% percentage significance critical t-value of 6 degrees of freedom (7 months of sample - 1)

```

Conclusion

- We can see that Trial store 77 sales for Feb, March, and April exceeds 95% threshold of control store. Same goes to store 86 sales for all 3 trial months.
 - Trial store 77: Control store 233
 - Trial store 86: Control store 155
 - Trial store 88: Control store 40
- Both trial store 77 and 86 showed significant increase in Total Sales and Number of Customers during trial period. But not for trial store 88. Perhaps the client knows if there's anything about trial 88 that differs it from the other two trial.
- Overall the trial showed positive significant result.
